### Shopping List

Item	Quantity	Description
60" x 31" x 3/4" plywood	1	
wood glue		
1-1/4" brad nails	handful	
2" wood screws	handful	optional reinforcement for the joints
3" wood screws	4	to mount it to the wall.

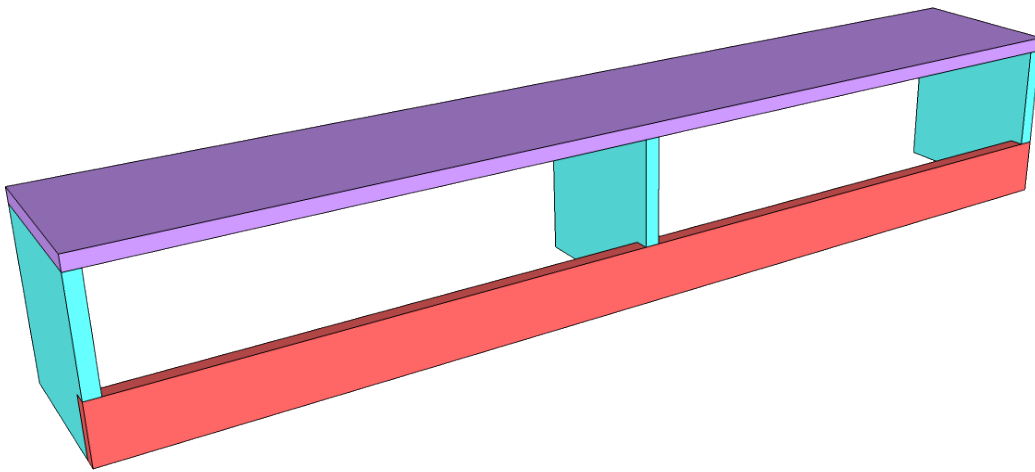

1

With the 3" mounting strip laid on edge, use glue and brad nails to secure the three vertical pieces into the notches.

2

The assembly should already be upside down at this point so use glue and brad nails to attach the bottom shelf.

3

Flip the assembly over and attach the top shelf with glue and brad nails. I decided to go back and add screws to every joint just for a little extra piece of mind but I don't think they are 100% necessary for this application. The mounting strip has enough area to use four 3" screws spaced on 16" centers to attach the shelf to four wall studs.
